SUPERPOSED COLORS GRAPHIC FOR PROVIDING A CONTINUOUS
COLOR FADE TRANSITION BETWEEN TWO COLORS

ABSTRACT OF THE DISCLOSURE

A superposed colors graphic providing a true, continuous color fade transition between two different colors achieved by applying first and second color graphics onto respectively different side surfaces of at least one transparent substrate, each color graphic having a respective color fade. The first and second color graphics are mutually aligned such that the color fade of each of the color graphics are mutually coextensive and superposed so as to thereby provide a continuous fade between the colors. The first and second color graphics may be applied to the respective substrate side surfaces by any suitable method, such as for example by silk screening, by lithography or by decorative film applique.
